10 Tenets of robotcowboy (A Manifesto)

1. The cyborg embodies the computation: all of the gear must be worn on the body
2. Plug and play: plug in the system, turn it on, it works
3. Human frailty: there must be room to fail
4. Human energy: live sweat must be felt when listening to every song
5. Good with the bad: the human is enabling/disabling, the machine is enabling/disabling

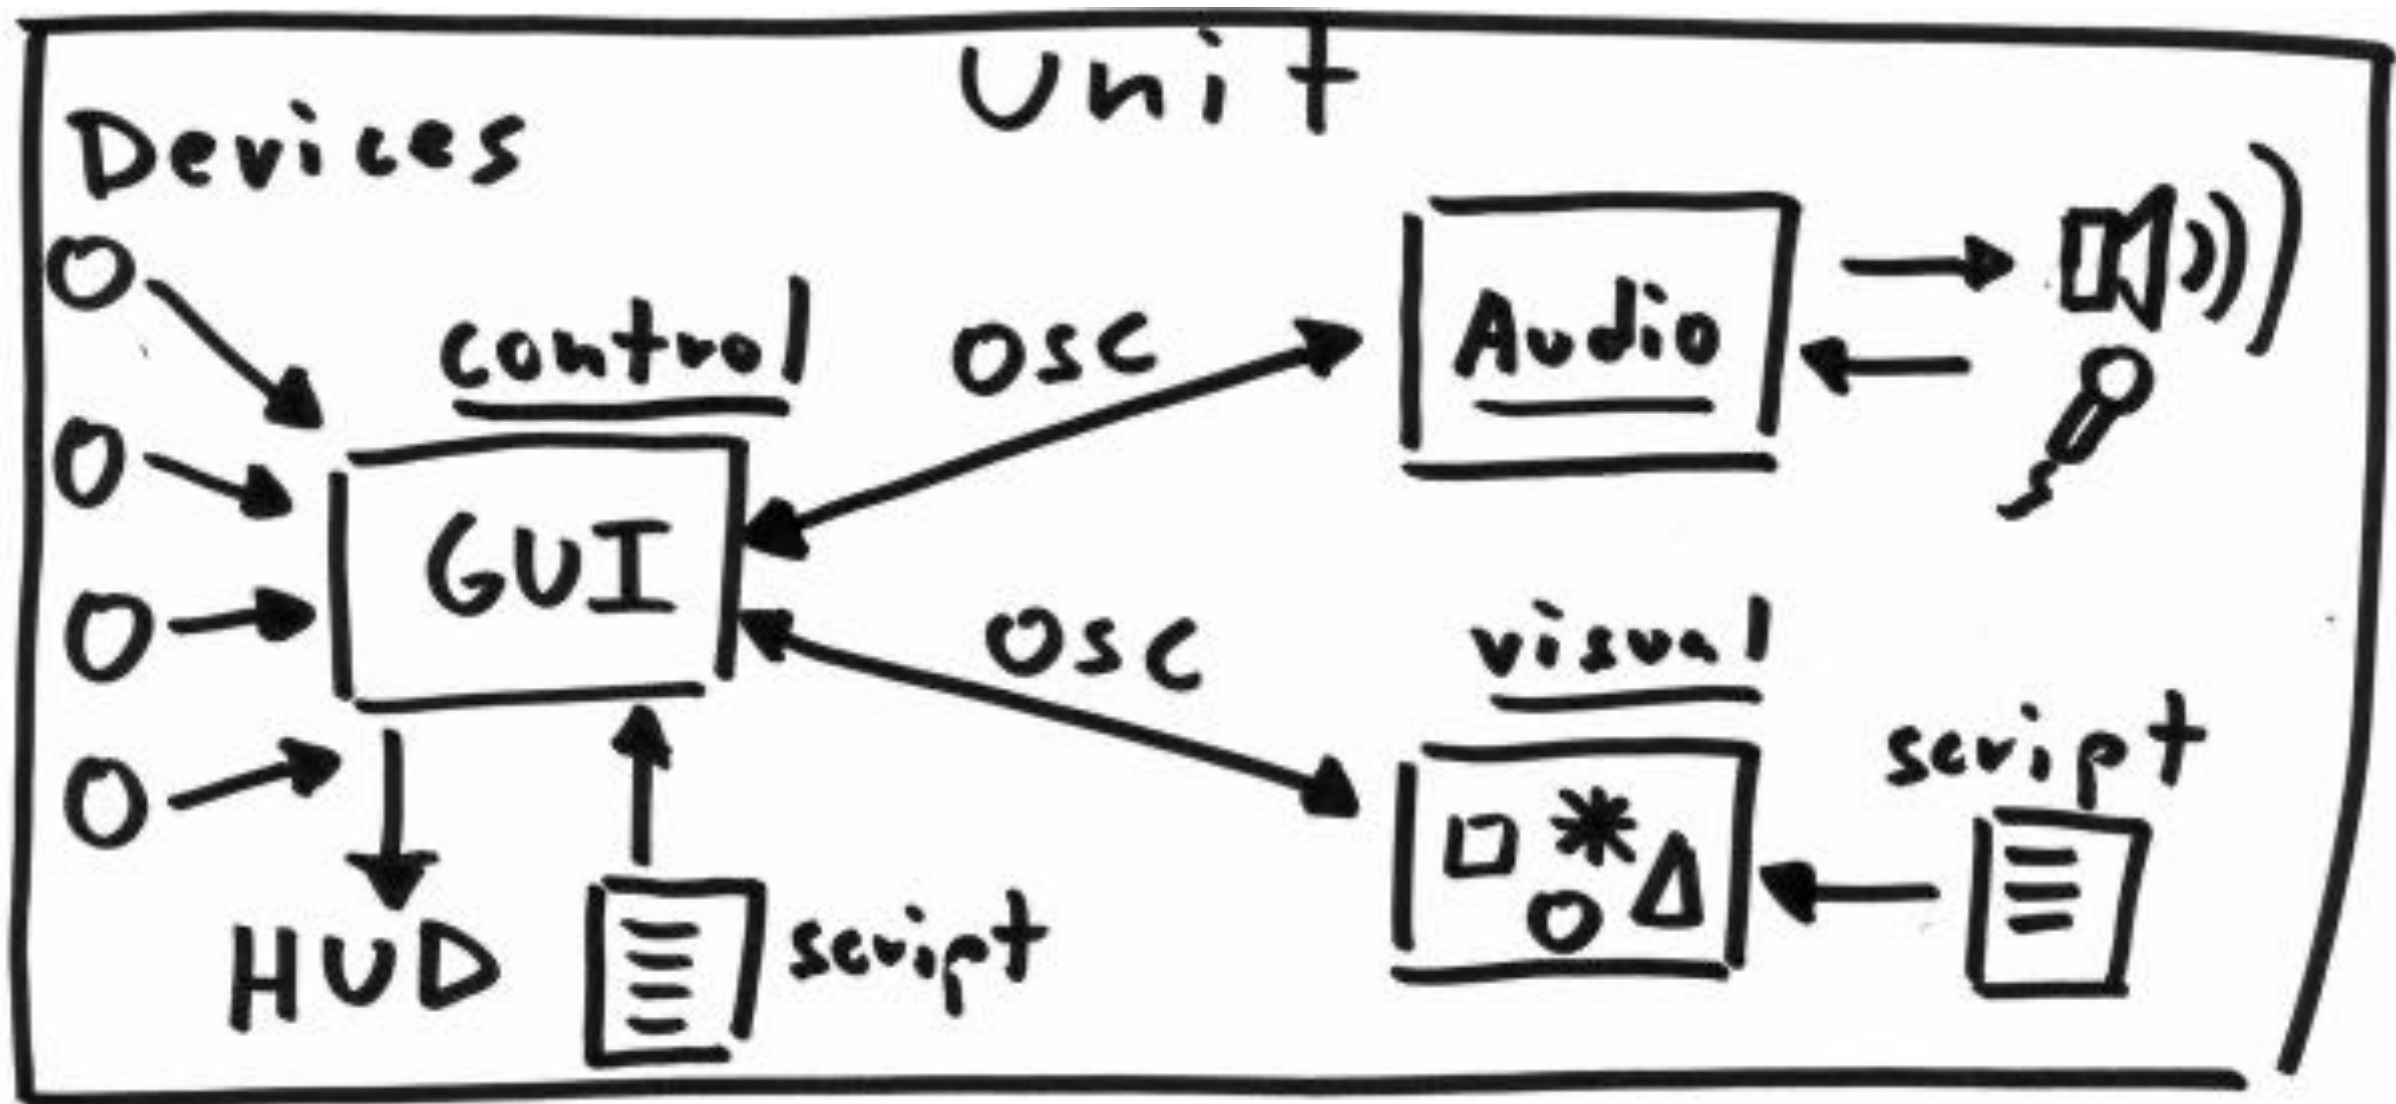

6. A real prototype: new ideas and gear must be tested in a real environment, risks must be taken

7. The non-recording artist: the performance is the commodity, recordings should be live

8. WY SEE IWYG: sound and action should be proportional

9. WY HEAR IWYG: everything should be reproducible live

10. Creative freedom: open source software should be used as much as possible
